

How can Uterine Fibroid Embolization expand your practice?

Cios Flow and Alpha are designed to help providers make any procedure more straightforward and efficient. These mobile c-arms help assist providers identify where the uterine fibroids are during the minimally invasive surgery. The tablet-like touch gestures let you collimate, rotate and flip images with just one finger.

Features

- » Retina Imaging Chain with CMOS technology
- » SpotAdapt and touch gestures
- » High-brightness green lasers
- » Lightweight system design
- » Wireless footswitch

Expand your practice with the help of Uterine Fibroid Embolizations
